

### **Data Analysis Requested by Disqualification Subcommittee, 3/22/2022:**

I'm happy to discuss these ideas further, answer questions, etc. Broadly speaking, the Disqualification group was interested in developing narratives to support its work based on these data. Here are their specific requests:

- What are the top 10 crimes in each category that lead to a disqualification by year? For example, the crimes with the most permanent disqualifications in 2018 (vs 2019), the crimes with the most 15-year disqualifications, etc. What percentage of the total crimes in this disqualification period do these represent?
- What evidentiary standards were these top 10 based on? (PoE, conviction, adjudication, etc).
- How many crimes were there in each category of conduct (violent crimes, drug-related crimes, property/financial crimes, etc)? It might be best for the group to develop its own categories, rather than relying on official definitions.
- [When the group gets variance/set-aside data] What percentage of disqualifications for particular crimes (for example, check forgery), received a set-aside/variance? [If more than one crime, the Disqualification subcommittee is just interested in the first two.]
