

## Mayo School of Health Sciences

### Vision

Mayo School of Health Sciences is committed to educating the health professionals of the future, both to meet the needs of Mayo Clinic as well as to spread the Mayo culture and philosophy of health care beyond the walls of the institution. Our goal is to be a national/international leader in the transformation of health sciences education.

- We will teach not only the knowledge and skills of each profession, but also the professionalism, patient centeredness, and altruism that distinguish Mayo graduates.
- We will embrace state-of-the art educational technology, especially on-line learning, while preserving the age-old methods of face-to-face learning from experienced preceptors and mentors.
- We will support our faculty in their journey to be good educators and scholars.
- We will emphasize interprofessional education to prepare our learners for the interprofessional practice and teamwork that will be the hallmark of future health care.
- We recognize that new knowledge is accumulating at an amazing pace and will teach our students to prepare for life-long learning and self-development.
- We are committed to increasing the diversity of our learners to prepare them to serve an increasingly diverse country and world.
- We recognize the financial burdens our students carry and will work to relieve these within the framework of fiscal responsibility to Mayo Clinic.

### Overview

- One school with campuses in MN, AZ, FL
- >1,700 student (2013) – 1,264 in MN
